

SOS ACHIEVES SOC 2 TYPE II COMPLIANCE

Reinforcing Commitment to EnterpriseGrade Security and Data Privacy

NASHVILLE, TN – February 19, 2026 — SOS, a leading provider of End-to-End Equity Management, today announced that it has successfully completed its Service Organization Control (SOC) 2 Type II audit. This milestone confirms that SOS's information security practices, policies, and operations meet the rigorous standards established by the American Institute of Certified Public Accountants (AICPA).

In an era where data breaches are increasingly sophisticated, the SOC 2 Type II certification serves as a "gold standard" for tech companies. Unlike the Type I audit, which looks at a point in time, the Type II audit evaluates the effectiveness of a company's controls over an extended period, proving that SOS doesn't just have security protocols on paper—it lives them every day.

Security Built on Trust

The audit conducted by Insight Assurance verified that SOS's systems are designed to keep customer data safe across the key Trust Services Criteria: Security, Availability, and Confidentiality.

"Our customers trust us with their most sensitive data, and we don't take that responsibility lightly," said Vanessa Harrison, Vice President of SOS Operations at Stock & Option Solutions. "Achieving SOC 2 Type II compliance isn't just a box we checked; it's a reflection of our team's obsession with protecting our users and maintaining a transparent, secure environment."
